(54) Title: ULTRASONIC WASHING METHOD FOR CLOTHS

(54) 発明の名称: 衣類等の超音波洗浄方法

(57) Abstract: An ultrasonic washing method for cloths capable of efficiently and automatically performing a series of processings for washing such that, after following washing to be efficiently and automatically performed after the different types of cloths or a large volume of cloths are washed, these cloths are order arranged, comprising the steps of sortably storing the cloths in a washing basket (A) for storing the cloths by vertically suspending from hangers, a washing basket (B) for storing the cloths by holding to the hangers and laterally laying down in stacked state, and a washing basket (C) for storing the cloths by folding up and stacking on each other, inputting the baskets into a pre-processing chamber (1) and exhausting to remove gases such as air contained in the clearances in the cloths, applying a pretreatment to immerse the cloths in the washing fluid to the cloths by leading deaerated washing fluid into the pre-processing chamber (1), transferring the baskets into a washing tank (2) and deaerating dissolved gases from the cloths by circulating the washing fluid in the washing tank (2) while applying a washing treatment to wash the cloths by ultrasonic wave to the cloths, and after the washing processing is completed, transferring the baskets into a post-processing chamber (3) and performing a post-processing to rinse the cloths.
